

Fashion Retailer Monsoon Makes the Move from FTP to Managed File Transfer with MOVEit™

MONSOON

KEY CHALLENGES

- › Replacing several FTP products with a solution to give end users a simple and secure way to quickly transfer files with other people
- › Managing and automating all file and data movements and workflows
- › Ensuring privacy and confidentiality especially for secure banking transactions
- › Gaining visibility and insight into daily transactions

SOLUTION

- › MOVEit Transfer with end-to-end encryption and non-repudiation
- › MOVEit Automation to automate file-based business processes
- › Extensive and customizable reporting, flexible end user authentication

RESULTS

- › An intuitive solution with the required level of visibility
- › A single web interface for setting up and managing the data flow around the system
- › An extremely secure environment for all data transactions
- › Expanded deployment to include their e-commerce site

Monsoon, one of the world’s leading retail outlets for fashion and accessories, uses MOVEit to add security and auditability for file transfer between its international operations.

“We needed to replace our existing FTP products with a file transfer solution that would meet all our security and compliance requirements, and improve our governance over file and data transfers with our subsidiaries, partners and suppliers,” said Anish Shah, Operation Systems Manager, Monsoon. “We also needed a solution that would cleanly integrate with our existing systems, especially for secure banking transactions. MOVEit Transfer and MOVEit Automation ticked all those boxes and provided us with an intuitive solution with the level of visibility we required.”

The Vision

Monsoon’s IT team required three secure SFTP servers for its International Operations, Operations Data Interchange and Secure Banking Transactions. It was completely explicit in its demands – ultimately to give end users a simple and secure way to quickly transfer files with other people, but also the ability to manage and automate all file and data movements and workflows, ensure privacy and confidentiality with end-to-end encryption and non-repudiation and gain visibility and insight with extensive and customizable reporting.

The Solution

“MOVEit Transfer and MOVEit Automation were able to provide an extremely secure environment for all our data interactions as well as a single web interface for setting up and managing the data flow around the system,” said Shah. “We have been so impressed with the MOVEit products that we have subsequently deployed them to support our e-commerce site.”

“With hundreds of data breaches occurring over the past few years, some with multi-million dollar consequences, organizations must have the right solutions and practices in place when transferring sensitive information,” said Loic Triger, vice president of International Sales, Ipswitch File Transfer. “Companies trust Ipswitch to help them safeguard confidential information and the MOVEit suite can deliver an extremely secure MFT solution that provides three hundred and sixty degree visibility into global file transfer activity, coupled with automated controls and policy enforcement.”

MOVEit is the world's most comprehensive and easy-to-use secure managed file transfer solution. The technology goes well beyond traditional file transfer by combining best-in-class encryption with global visibility into all file transfer activity across the business. The system streamlines data transfer workflows, provides a quick and easy way to exchange sensitive information regardless of file location or size and automatically authenticates employees, business partners and customers based on internal directories and databases.

“MOVEit Transfer and MOVEit Automation were able to provide an extremely secure environment for all our data interactions as well as a single web interface for setting up and managing the data flow around the system. We have been so impressed with the MOVEit products that we have subsequently deployed them to support our e-commerce site.”
